## DETAILED ACTION

### *Claim Objections*

1. Claim 3 is objected to because of the following informalities: Claim 3 recites the limitation, "consisting in 'nonwoven' co-extruded fibers. The examiner interprets the claim to mean consisting of nonwoven co-extruded fibers. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Gipson USPN 5445628.

As to claim 1, Gipson discloses an incontinence pad having a belt 12 fastend to the back of the pad (Figure 2) and long enough to surround the wais and be fixed on the outside of the front border. The belt features right and left semi-belts (Figure 2 shows left and right sides of belt 12). Figure 3 shows the semi belts overlapped. The belt 12 has projections 18 capable of perforating the overlapped layers (col. 3, lines 39-57). Regarding the limitations of adapted to surround and be fastened on the outside of the front border, these limitations are directed to an intended use of the article. Intended use must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

If the prior art structure is capable of performing the intended use, then it meets the claim limitations.

The limitations of compression by laminations are directed to a process of making the article. "Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted). MPEP 2113.

As to claim 2, Gipson discloses the fastening system may be an adhesive insert (col. 4, lines 9-11; col. 11, lines 1-7).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-5 rejected under 35 U.S.C. 103(a) as being unpatentable over Gipson USPN 5445628.

Gipson teaches the belt may be of single or double thickness (col. 3, lines 59-61). Gipson is silent as to the materials used to make the belt. It would have been an obvious matter of design choice to use the claimed nonwoven or composite laminate, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fahrenkrug USPN 5135522 is cited to show absorbent articles with a belt-type fastener.
